# Product Development Prototyping

## PAY

The median annual wage for industrial designers was \$67,130 in May 2015.

## JOB OUTLOOK

Employment of industrial designers is projected to grow 2 percent from 2014 to 2024, slower than the average for all occupations. Consumer demand for new products and new product styles should sustain the demand for industrial designers. Those individuals that have rapid prototyping and 3D experience should see employment needs matching or exceeding the projected growth.

## ABOUT THE PROGRAM

This program introduces students to product development and prototyping opportunities with emphasis on core design concepts, testing analysis, and rapid prototyping through the use of modern graphic software, laser scanning technology, and industry standard rapid prototyping equipment. This program is well suited for students looking for a career in product development, current professionals who want to update their skill level, as well as entrepreneurs interested in working to develop their own ideas and products.

## WHAT DO PRODUCT DEVELOPMENT PROTOTYPING PERSONS DO?

Most rapid prototyping jobs are incorporated into different industrial positions but seem to mirror many of the duties of industrial designers. Industrial designers develop the concepts for manufactured products, such as cars, home appliances, and toys. They combine art, business, and engineering to make products that people use every day. Industrial designers focus on the user experience in creating style and function for a particular gadget or appliance.

## WHERE DO THEY WORK?

Industrial designers work in offices in a variety of industries. Although industrial designers work primarily in offices, they may travel to testing facilities, design centers, clients' exhibit sites, users' homes or workplaces, and places where the product is manufactured.
