COURSE DESCRIPTION:
This course provides students with the fundamentals of three dimensional drafting, geometric
dimension and tolerances; and an introduction to organization of several different part files which
share common data and components, subassemblies and assemblies.

PREREQUISITES: CAD 222

EXPECTED COMPETENCIES:
Upon successful completion of this course, the student will:
1. Know how to read and interpret industrial prints without laboriously learning how to make
   mechanical drawings or master drafting techniques
2. Identify the application of drawing fundamentals and drafting symbols as recommended by the
   American Standards Association
3. Identify and become acquainted with the terminology frequently used in the machine trades
4. Study and familiarize her/himself with the principles of mechanical drawing and the related
   technical information used to interpret new materials of assigned prints
5. Will learn and identify the reproduction machines that are employed by industry in reproducing
   drawings from an original and / or master design
6. Learn the basic mathematical and measuring skills applied to blueprint reading used for the
   solution of various shop problems
7. Understand and apply the fundamental procedures that are connected with the consideration of
   design to produce concept in industry.
8. Develop a high degree of accuracy in interpreting problems in current drafting practices.
9. Summarize problems covering all of these fundamentals. Will identify the trade theory and
   apply same to reading problems and prints as they may relate to dimensioning, shape
   description, machine operation and other data which may be required in the fabricating,
   construction, assembly and operation of parts and units
10. Develop a freehand drawing assignment so that she/he can apply certain principals of
    projection and other drawing practices
11. Develop a high level of competency in metric dimensioning which is becoming mandatory in
    dealing with products in the international industry
12. Learn welding symbols that are standard in the industry

ASSESSMENT METHODS:
Student performance may be assessed by examination, quizzes, case studies, oral conversation,
group discussion, oral presentations. The instructor reserves the option to employ one or more of
these assessment methods during the course.

GRADING SCALE:
90%-100% = A
80%-89.9% = B
70%-79.9% = C
60%-69.9% = D
<60% = E
