NEW CIS Programming Language Courses

CIS 200 - Python Programming Language

This course covers core programming basics—such as data types, control structures (selection and repetition), algorithm development, and functions—using the Python programming language. In addition, the fundamental principles of Object-Oriented Programming are discussed. Students will solve problems, explore the application of software development challenges, and will create practical applications.

CIS 201 - C# Programming Language (CRN: 46367)

This course is an introduction to computer programming for Windows. Emphasis will be on the fundamentals of structured design, development, testing, implementation, and documentation, including language syntax, data and file structures, input/output devices, files, and databases. The following C# topics will be covered: C# syntax, basics of C# classes, interfaces, exception handling, assemblies, .NET collections, Windows Forms, and relational database programming. The Microsoft Visual Studio .NET IDE will be used for program development.
